# One-stop shop

MetaMap is a single platform for all your digital identity, fraud and compliance needs. From government databases to specific checks and watchlists, we mine and make sense of deep user data to make it readily usable to our customers.

## Many providers, one platform

We integrate with local government databases and other identity data providers, even in regions where identity infrastructure is lacking.

## Instant integration

Our API and SDK are designed to optimize user experience, enabling a high-level of customization and effortless integration.

### For SDK we support:

**Web:** For desktop and mobile

**Native mobile:** iOS, Android

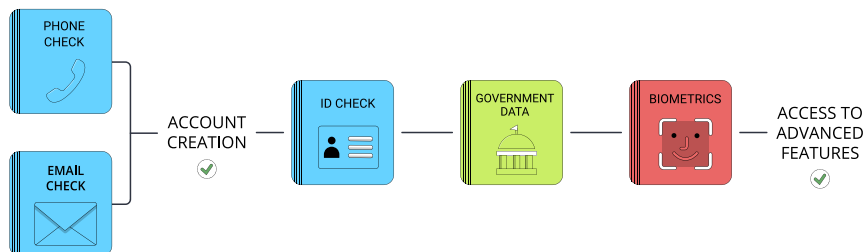

**Hybrid mobile:** React Native, Cordova, Xamarin

# Compliance metamaps

Scale your compliance and risk management operations end-to-end with MetaMap. Use pre-built metamaps like Onboarding, Password Reset, or KYC, or build your own with our customizable merit blocks, such as ID Card fraud detection, Validation of National IDs, Biometrics, and AML checks.

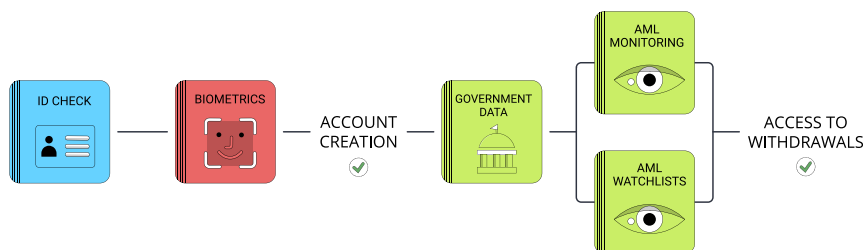

## User onboarding

Get higher onboarding completion rates with an onboarding metamap.

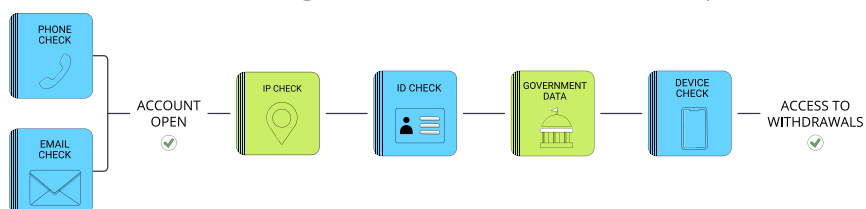

## AML monitoring

Meet compliance requirements in each of your markets with an AML metamap.

## Fraud detection

Reduce fraud by checking ownership and fraud risk of IDs and digital assets with a fraud metamap.

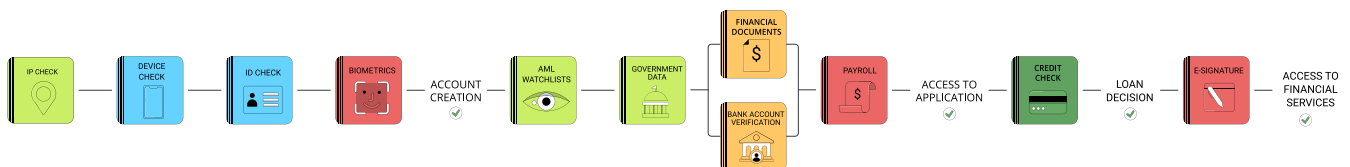

# Financial metamaps

Build intelligent flows so your users can connect their financial institution accounts, be verified through local bureaus or upload their financial documents. Their data is then standardised, enriched and returned through a single open finance API.

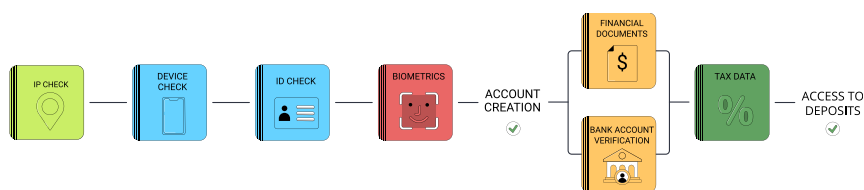

## Financial service account opening

Applying for financial services should be easy. Our user-friendly, highly customizable financial data integrations help you acquire more customers quickly and keep costs low with automated risk-based decision making and loan closing.

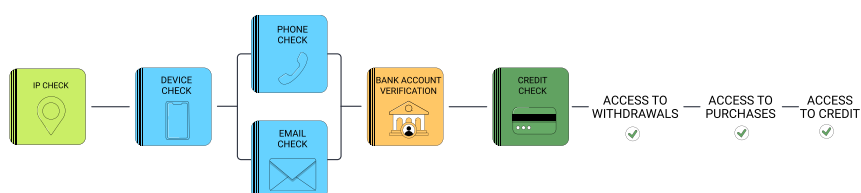

## Account holder identification

Verify the true account holder and financial account details before initiating a deposit, withdrawal or purchase to reduce downstream errors such as bank returns and chargebacks when transacting with your users.

## Buy now, pay later enablement

Use Financial metamaps within your e-commerce flows if you are looking to extend credit on purchases or just want to perform a bit of extra security on high risk/high dollar transactions.

# Work metamaps

Onboard freelancers, gig workers and employees while ensuring compliance, decreasing safety incidents and minimising user friction with thorough identity verification, background screenings, skills assessment, asset verification and affordability checks. Manage personnel risk with user access management and scheduled re-verifications.

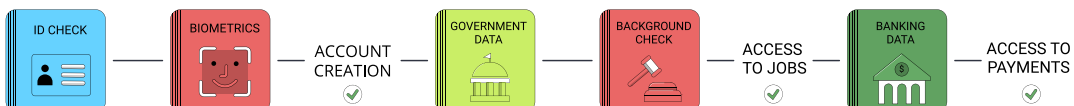

## Driver onboarding

Onboard drivers onto your platform seamlessly

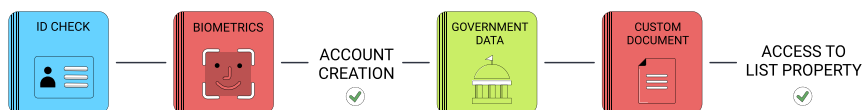

## Gig worker onboarding

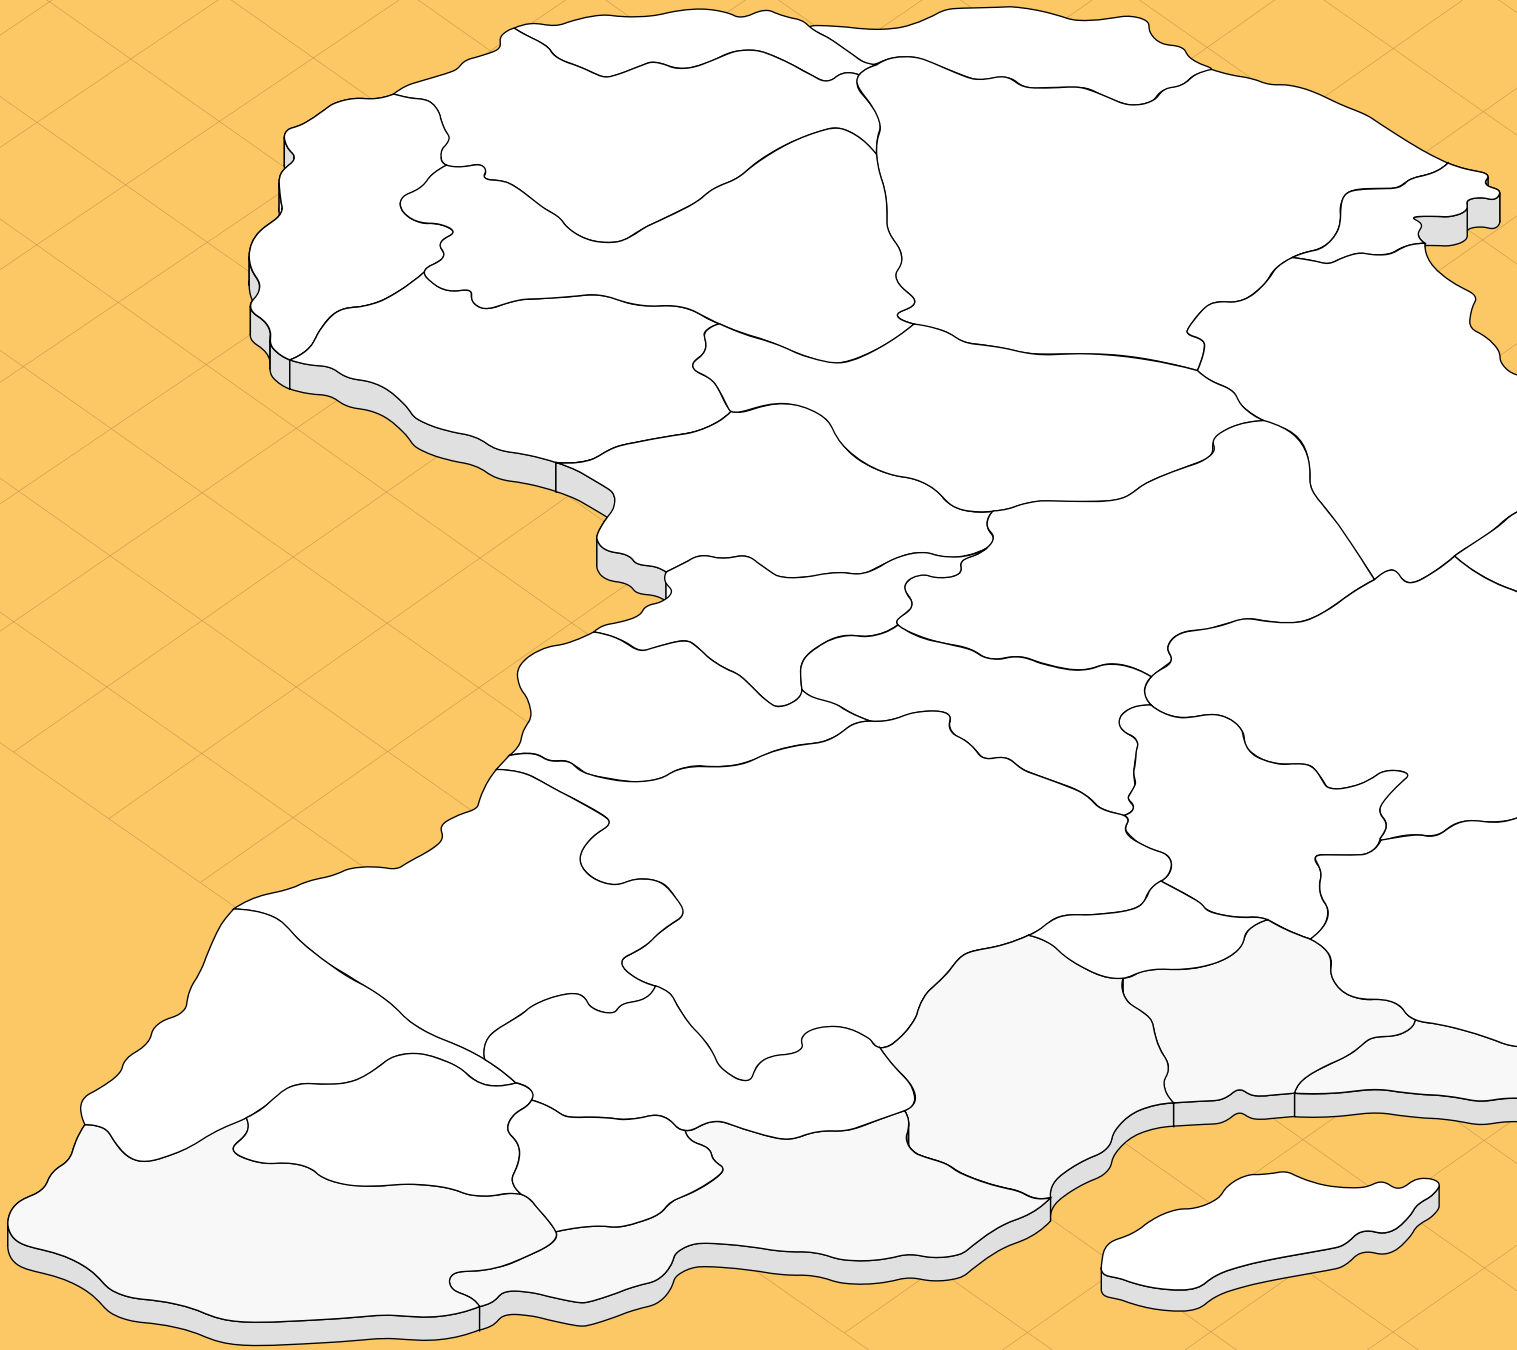

Onboard gig workers onto your platform seamlessly

## Home owner onboarding

Onboard houses and apartments onto your platform

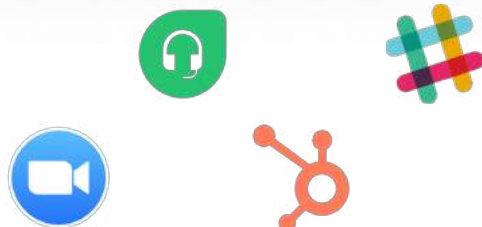

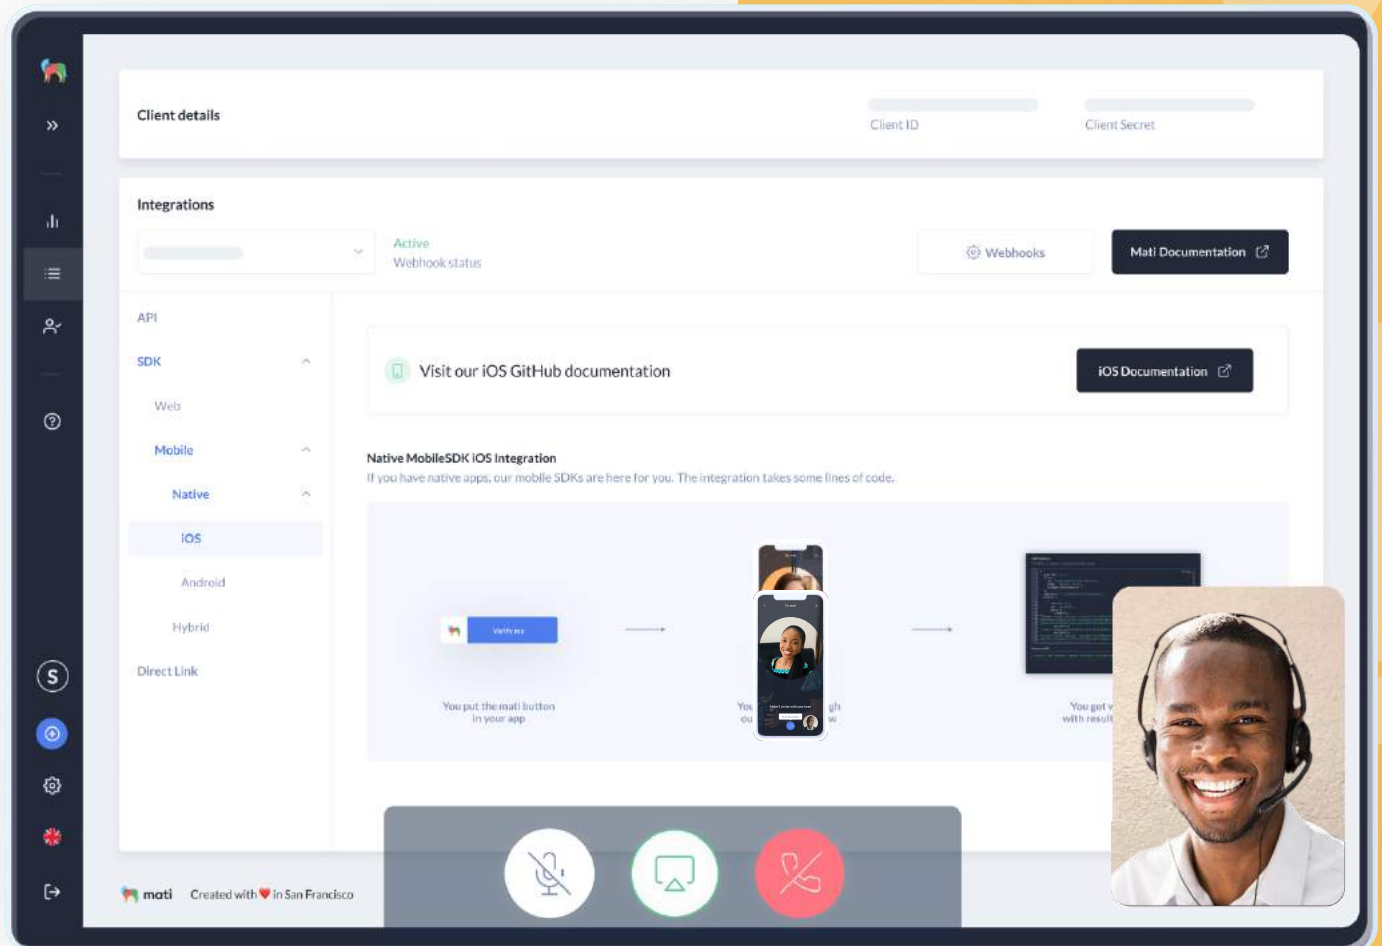

# Local solutions for local problems

We adapt to local requirements while standardizing identity information worldwide. We are mapping the identity infrastructure end-to-end across the world, currently covering 85% of the countries. In Africa, we partnered with 50+ organizations and are constantly expanding.

# Seamless onboarding, continuous support

Integrate MetaMap easily and adapt our verification processes to your customer journey with the help of our consultants.

## Our customer support extends far beyond onboarding

MetaMap's Solution Experts are your partners at every step of the customer journey: from making integration frictionless, to helping you build new workflows.

# Compliant Worldwide

MetaMap maintains the highest security levels and compliance standards, enabling our clients to meet and exceed regulatory standards globally.
